

Test Report

Number 18-002246-PR03 (PB-A01-0203-en-01)

Owner (Client) Salamander Industrie-Produkte GmbH
Jakob-Sigle-Str. 58
86842 Türkheim
Germany

Product **Tilt and turn window**

Designation Shipping name: **Streamline 60**

Details Manufacturer Salamander, Industrie-Produkte GmbH -
Türkheim; Material Polyvinyl Chloride unplasticized (PVC-U)
white; Type of opening Tilt and turn;
Opening direction DIN right, inward opening;
Overall dimensions (W x H) 1050 mm x 1550 mm
test sequence

Order Testing of air permeability, watertightness, resistance to wind
load, operating forces

Contents The test report contains a total of 17 pages and annexe (9
pages).

Note The test report shall only be published in its unabbreviated
form.
The "Guidance Sheet for the Use of ift Test Documents" ap-
plies.

Testing of air permeability, watertightness, resistance to wind load, operating forces

1 Execution

1.1 Sampling and product description

The following details have been presented to ift:

Sampler: Salamander Industrie-Produkte GmbH, 86842 Türkheim (Germany)
Sampling date: 23.07.2018
Evidence: A sampling report has been presented to ift.
Date of delivery: 14.08.2018
Description: For product identification the specimen tested is described/represented in the Annex. Material specifications, item numbers and other company-specific descriptions are details provided by the client and will be checked for plausibility by ift.

Test specimen no.: 18-002246-PK03 / WE: 46513-003

Windows and doors - Watertightness - Test method

EN 12046-1:2003 - 11

Operating forces - Test method - Part 1: Windows

EN 12211:2016 - 03

Windows and doors - Resistance to wind load - Test method

*) and the relevant national versions, e.g. DIN EN

1.3 Short description of the procedures

The tests were performed according to the following sequence:

- Operating forces
- Air permeability
- Watertightness
- Resistance to wind load
- Air permeability - Repeated test after wind load test
- Resistance to wind load - Safety test

Watertightness according to EN 1027:2016-03

Prior to the test, three positive pressure pulses were applied to the test specimen. Subsequently, the external surface of the test specimen was constantly sprayed with water through nozzles, conforming to the standard. After a 15-minute pressureless spraying period an additional overpressure in terms of subsequent pressure steps was applied. The pressure steps were defined by the standard and were kept for 5 minutes each (see illustration). Watertightness was tested up to the maximum test pressure difference.

The water volume applied and the angle of spray depend on the intended type of installation of the component (protected / unprotected) and the height of the component (< / > 2.5 m) according to the standard. The required water volume and the angle of spray are documented in the measuring data sheet.

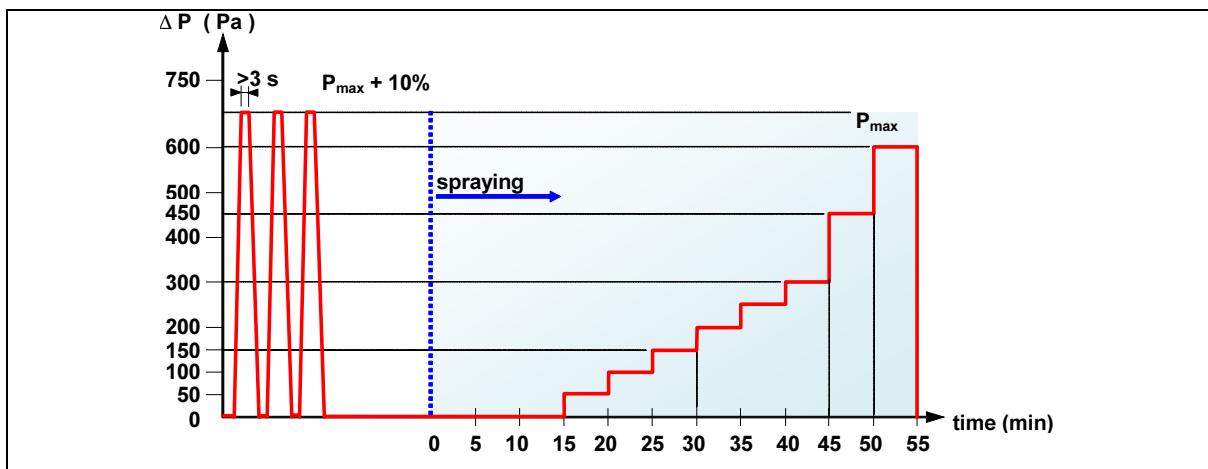

Illustration Test sequence for watertightness

Operating forces according to EN 12046-1:2003-11

Before starting the first measurement, the test specimen was manually operated 5 times with all relevant hardware operated and fully engaged.

During the test the minimum static force and/or torque was measured required

- to release and/or lock the hardware (locks or handles);
- to commence opening and
- to complete closing of the casement and/or sash.

Testing of air permeability, watertightness, resistance to wind load, operating forces

Air permeability according to EN 1026:2016-03

Leakages of the test set-up were made visible using artificially generated fog and were sealed using permanently resilient sealant.

Air permeability was tested for the respective pressure steps at negative pressure and positive pressure in accordance with the following diagram. At the beginning of each measurement the test specimen was exposed to three pressure pulses.

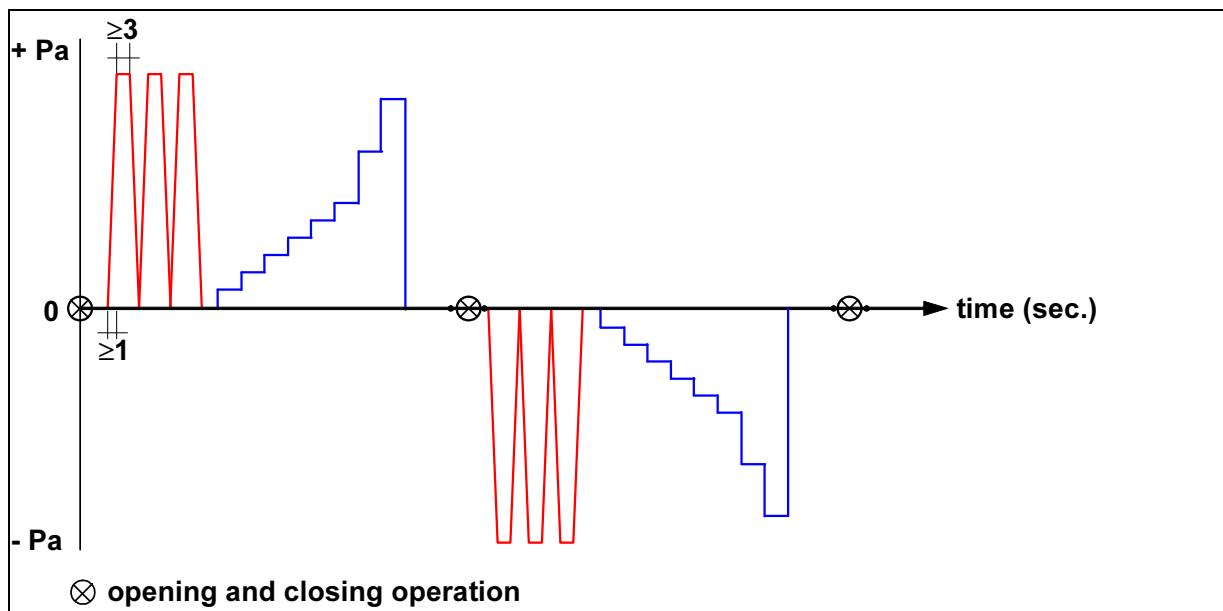

Illustration Test sequence for air permeability

Testing of air permeability, watertightness, resistance to wind load, operating forces

Resistance to wind load according to EN 12211:2016-03

Resistance to wind load was tested in accordance with the standard and conducted in steps at positive pressure and negative pressure up to the test pressure p_1 . The test specimen was exposed to three pressure pulses $\Delta p_1 + 10\%$. This was followed by determination of the frontal deflection of test specimen for each pressure step when exposed to positive test pressure Δp_1 and negative test pressure $-\Delta p_1$. Then the test specimen was subjected to 50 cycles including alternating positive and negative pressures of $\pm \Delta p_2 = \Delta p_1 - 50\%$.

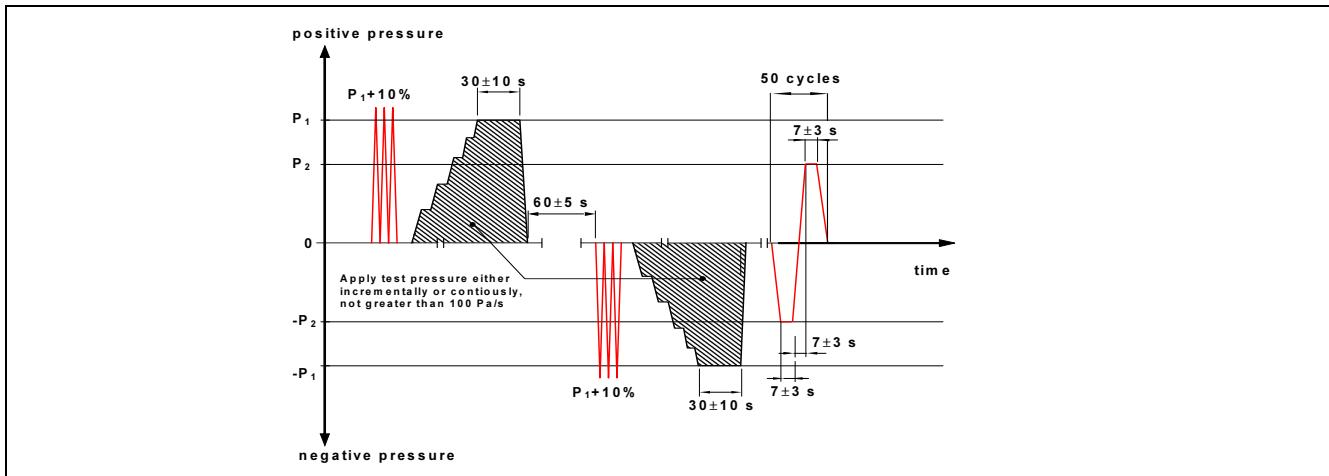

Illustration Test sequence for resistance to wind load - Deflection and alternating positive/negative pressures

Air permeability - Repetition of test after wind load according to EN 1026:2016-03

Following the static resistance to wind load test (deflection) and alternating positive/negative pressure the test for air permeability was repeated in conformity with EN 12210.

Testing of air permeability, watertightness, resistance to wind load, operating forces

Resistance to wind load - Safety test according to EN 12211:2016-03

The wind resistance test (safety test) was conducted at negative pressure and positive pressure in accordance with EN 12211 up to test pressure $\Delta p_3 = \Delta p_1 + 50\%$.

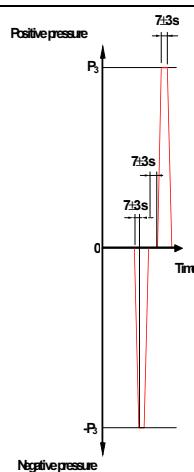

Illustration Test sequence for resistance to wind load - safety test

Testing of air permeability, watertightness, resistance to wind load, operating forces

2 Detailed results

Operating forces according to EN 12046-1:2003-11

Project-No.	18-002246-PR03		
Basis	EN 12046-1:2003-11 Operating forces - Test method - Part 1: Windows		
Test equipment	DM/020521 - Torque wrench		
Test specimen	Tilt and turn window		
Test specimen No.	46513-003		
Date of test	22.08.2018		
Test engineer in charge	Daniel Gromotka		
Test engineer	Daniel Gromotka		
Implementation of tests			
Deviations	There have been no deviations from the test method as specified in the standard/basis.		
Ambient conditions	Temperature 28.0 °C Air humidity 46 % The ambient conditions are in accordance with the standard/basis requirements.		

Measurement data/Results

Test of main mode of operation

Pivot arm	0,13 m
Grip height	0,60 m

Table: Measurement operating forces for the release / locking operating

Measured values	1	2	3	Average value M

Implementation of tests
Deviations There have been no deviations from the test method as specified in the standard/basis.

Ambient conditions Temperature 25 °C Air humidity 53 % Air pressure 966 hPa
The ambient conditions are in accordance with the standard/basis requirements.

Testing of air permeability, watertightness, resistance to wind load, operating forces

Measurement data/Results

Closing condition closed and locked

Maximum test pressure: $\pm 2000 \text{ Pa}$ 3 pressure pulses of 2200 Pa

The deflection was not measured because, due to the perimeter locking and the existing locking distance at the existing specimen, the loads are directly conducted into the frame and no deformation of the frame members $> l/300$ is likely to occur at the specified wind loads.

The test specimen was exposed to a load $\pm 2000 \text{ Pa}$ as specified by EN 12211.

Dynamic wind loads (negative / positive pressures)

Table: pressure pulses

p ₂ in Pa	200	400	600	800	1000
passed					✓

50 cycles at p₂ $\pm 1000 \text{ Pa}$ **Malfunctions at test specimen**

At the test specimen were no malfunctions detected.

Testing of air permeability, watertightness, resistance to wind load, operating forces

Size of active casement 1000 mm x 1500 mm
Area of test specimen 1,63 m²
Length of opening joints 5,00 m

Subsequent to the test of resistance to wind load by application of test pressures p₁ and p₂, the upper limit of the achieved air permeability class must not be exceeded by more than 20% as set out by EN 12207.

The requirements were fulfilled.

Testing of air permeability, watertightness, resistance to wind load, operating forces

Resistance to wind load - Safety test according to EN 12211:2016-03

Safety test passed at up to p₃ ± 3000 Pa.

Malfunctions at test specimen

At the test specimen were no malfunctions detected.

Testing of air permeability, watertightness, resistance to wind load, operating forces

3 Summary

3.1 Result

The test results are shown in the measuring data sheet, see item "Detailed results".

3.2 Instructions for use

This test/evaluation does not allow any statement to be made on further characteristics of the present structure regarding performance and quality, in particular the effects of weathering and ageing.

The test was performed according to standard and the details for identification of the test specimen are complete; on the basis of this Test Report an "ift-Nachweis" (Evidence) can be issued.

Die Beschreibung des geprüften Probekörpers dient der normkonformen Identifizierung des Produkttyps, für den die festgestellten Werte gelten. Alternativ zur vorgegebenen tabellarischen Datenerfassung kann die Beschreibung auch in Form von technischen Zeichnungen, Verarbeitungsrichtlinien, Stücklisten etc. erfolgen. Zusätzliche Produktdetails bitte ergänzen.

Die *Mindest-Angaben sind Voraussetzung für die Erstellung eines ift-Nachweises. Nur bei Angabe aller in diesem Dokument angeforderten Daten ist ggf. eine nachträgliche Gutachtliche Stellungnahme möglich. Alle *Mindest-Angaben des Auftraggebers werden vom ift auf Plausibilität geprüft; ggf. festgestellte Abweichungen und/oder ergänzende Feststellungen werden dokumentiert.

The description of the specimen to be tested serves to identify, in conformity with the standards, the product type, for which the values determined will apply. Alternatively to the specified tabulated data collection, the description may also be made by technical drawings, processing instructions, parts lists, etc. Please supplement additional product details.

The *minimum details are the precondition for issuing the "ift-Nachweis". Only upon provision of all requested data subsequently requested Expert Statements may be issued. All *minimum details provided by the client will be checked for plausibility by ift, any deviations observed and/or additional findings will be documented.

* Mindestangaben
